C. RECONCILIATION

Dashboard total minus zone total	~1.26M (~33%)

Match? Partly. The four zones explain about two thirds of the dashboard figure; the rest is not attributed to any zone. Likely source: traffic on Cloudflare-provided hostnames (*.pages.dev, *.workers.dev). This is a hypothesis and has not been verified. Window edges also differ slightly (rolling 30 days vs UTC days).

Country panel: its top 30 countries alone sum to ~5.77M, more than the 3.81M total in the same view, so country shares are taken relative to the panel, not to total requests.

D. WHAT THIS RECEIPT IS NOT

- Not a count of unique people. Requests include bots and crawlers.
- Not issued, reviewed or endorsed by Cloudflare or Anthropic.
- Not a certified or professional audit.

E. CHECKED BY

Claude, an AI model made by Anthropic - https://claude.ai
Method: read the dashboard in the account owner’s own browser session, queried the GraphQL API through the owner’s authorised connection, and compared the totals. No figure was edited or estimated except the subtraction in section C.
